Pressure-induced B1-to-B2 phase transition in AgSbSe$_2$\textsuperscript{1} EUNJA KIM, RAVHI KUMAR, ANDREW CORNELIUS, MALCOLM NICOL, Department of Physics and High Pressure Science and Engineering Center, University of Nevada, Las Vegas, NV 89154 — We have investigated the pressure-induced B1-to-B2 phase transitions in AgSbSe$_2$. High pressure x-ray diffraction experiments clearly show that the process starts at 20 GPa and completes at 55 GPa. Our density-functional calculations are in good agreement with the experiment and confirm the B1 to B2 transition which is similar to AgSbTe$_2$. The possible intermediate structure for B1-to-B2 transition in AgSbSe$_2$ occurring at 21-54 GPa is under investigation. Its similarity and difference to AgSbTe$_2$ will be discussed in this study.
