Gamma-Ray Compton Light Source Development at LLNL¹

FREDERIC HARTEMANN, SCOTT ANDERSON, DAVID GIBSON, CHRIS HAGMANN, MICAH JOHNSON, IGOR JOVANOVIĆ, MIKE MESSERLY, JASON PRUET, MIRO SHVERDIN, AARON TREMAINE, DENNIS MCNABB, CRAIG SIDERS, CHRIS BARTY, LLNL — A new class of tunable, monochromatic gamma-ray sources capable of operating at high peak and average brightness is currently being developed at LLNL for nuclear photo-science and applications. These novel systems are based on Compton scattering of laser photons by a high brightness relativistic electron beam produced by an rf photoinjector. Key technologies, basic scaling laws, and recent experimental results will be presented, along with an overview of future research and development directions.

¹This work was performed under the auspices of the U.S. Department of Energy by University of California, Lawrence Livermore National Laboratory under Contract W-7405-Eng-48.
