## Abstract Submitted for the MAR08 Meeting of The American Physical Society

Crystal Growth of Quasi-One Dimensional SrNbO $_{3.41}$  and LaTiO $_{3.41}^1$  ANN DEML, University of Wisconsin-River Falls, C. A. M. DOS SANTOS , Escola de Engenharia de Lorena-USP, JOHN NEUMEIER, B. D. WHITE, Montana State University — Single crystals of SrNbO $_{3.41}$  and LaTiO $_{3.41}$  were grown in order to investigate the physical properties of these quasi- one dimensional conductors. Single crystals growth was accomplished with an optical image furnace; characterization was performed with X-ray powder diffraction. The resistance and heat capacity of SrNbO $_{3.41}$  were measured in the temperature range 300 K > T > 0.3 K. SrNbO $_{3.41}$  was annealed to examine the influence of oxygen content on the electrical resistivity. The Debye temperature and electronic heat capacity coefficient of SrNbO $_{3.41}$  were found to be 458.5  $\pm$  0.2 K and 0.77  $\pm$  0.07 mJ/mol K respectively.
