Teaching a laboratory-intensive online introductory electronics course*1 MARK MARKES, University of Nebraska-Kearney — Most current online courses provide little or no hands-on laboratory content. This talk will describe the development and initial experiences with presenting an introductory online electronics course with significant hands-on laboratory content. The course is delivered using a Linux-based Apache web server, a Darwin Streaming Server, a SMART Board interactive white board, SMART Notebook software and a video camcorder. The laboratory uses primarily the Global Specialties PB-505 trainer and a Tenma 20MHz Oscilloscope that are provided to the students for the duration of the course and then returned. Testing is performed using Course Blackboard course management software.

1*The development of this course was supported by the University of Nebraska-Kearney Physics Department and Division of Continuing Education.
