Abstract Submitted for the MAR08 Meeting of The American Physical Society

Magnetic behaviour of the $\operatorname{Bi}_{2-x}\operatorname{Sr}_x\operatorname{Ir}_2\operatorname{O}_7$ pyrochlore CARLOS COSIO-CASTANEDA, OLIVER MARTINEZ-ANAYA, GUSTAVO TAVIZON, Facultad de Quimica, PABLO DE LA MORA, Facultad de Ciencias, FRANCISCO MORALES-LEAL, ROBERTO ESCUDERO, Instituto de Investigaciones en Materiales — Compounds of the $\operatorname{Bi}_{2-x}\operatorname{Sr}_x\operatorname{Ir}_2\operatorname{O}_7$ solid solution have been synthesized by the solid state reaction method. Structural modifications as well the valence states of Iridium have been studied as a function of the strontium content by Rietveld refinements and electrochemical analytical methods. Electrical properties of $\operatorname{Bi}_{2-x}\operatorname{Sr}_x\operatorname{Ir}_2\operatorname{O}_7$ show single phase and metallic behaviour in the whole range of compositions. Magnetically this system behaves as a Curie-Weiss paramagnet from 2-300 K. the magnetic moment suggests the presence of Ir^{5+} valence state.
