Experimental Studies of the Giant Dielectric Constant Materials
$\text{CaCu}_3\text{Ti}_4\text{O}_{12}$

JIANJUN LIU, WAI-NING MEI, Department of Physics, University of Nebraska at Omaha, Nebraska, 68182-0266, ROBERT W. SMITH, Department of Chemistry, University of Nebraska at Omaha, Nebraska, 68182-0266, DEPARTMENT OF PHYSICS, UNIVERSITY OF NEBRASKA AT OMAHA COLLABORATION, DEPARTMENT OF CHEMISTRY, UNIVERSITY OF NEBRASKA AT OMAHA COLLABORATION — We present results of four different experimental studies, namely (1) scanning electron microscopy, (2) dielectric measurements, (3) \textit{in-situ} high-pressure and X-ray and (4) low-temperature specific heat, on the insulating giant dielectric constant material $\text{CaCu}_3\text{Ti}_4\text{O}_{12}$. From analyzing the results, we first deduce the electronic and mechanical properties of the samples and conclude that the mechanism for high-dielectric constant phenomena is mostly extrinsic. In addition we propose a phenomenological model to explain the high dielectric constant behaviors at both low and high frequency regions.
