A totally asymmetric exclusion process with hierarchical long range connections\textsuperscript{1} JAKUB OTWINOWSKI, STEFAN BOETTCHER, Emory University — A non-equilibrium particle transport model, the totally asymmetric exclusion process, is studied on a one-dimensional lattice with a hierarchy of fixed long-range connections\textsuperscript{2}. This model breaks the particle-hole symmetry observed on an ordinary one-dimensional lattice and results in a surprisingly simple phase diagram, without a maximum-current phase. Numerical simulations of the model with open boundary conditions reveal an emergent disorder in the density profile, which is confirmed analytically.
