Managing Inflections in Life and Career: Tale from a Physicist

SANTANU BHATTACHARYA

By training, a physicist possesses one of the rarest qualities ever imparted in an educational degree program, namely, the ability to take on complex problems, divide them into “solvable” parts, derive solutions and put them back as insightful outputs. Dr Bhattacharya, CEO of Salorix, a research, analytics and consulting firm, explains how he has used these skills learned at the graduate school to build a career as a scientist, management consultant and entrepreneur. He will also speak about how the real-life skillsets of understanding and dealing with “Inflections”, self discovery and introspection can be a great tool for managing one’s life and career progression.
