The American Physical Society

Graphical representation of the process of solving problems in statics CARLOS LOPEZ, Instituto Tecnológico de Querétaro — It is presented a method of construction to a graphical representation technique of knowledge called Conceptual Chains. Especially, this tool has been focused to the representation of processes and applied to solving problems in physics, mathematics and engineering. The method is described in ten steps and is illustrated with its development in a particular topic of statics. Various possible didactic applications of this technique are showed.
