A Universal Relation between Heat Conduction and Diffusion¹

SHA LIU, BAOWEN LI, National University of Singapore — We rigorously prove a useful equality relating the heat current autocorrelation function and the mean square displacement of the energy diffusion. From this equality, we are able to recover the existing theories for normal diffusion and normal heat conduction. Moreover, we are also able to obtain a connection between anomalous diffusion and anomalous heat conduction. Our results are applicable to all isotropic systems with any dimension.
