**Transport Properties of Graphene on Strontium Titanate<sup>1</sup>**

RYUICHI TSUCHIKAWA, MASA ISHIGAMI, Department of Physics and Nanotechnology Center, University of Central Florida — We have investigated transport properties of mechanically exfoliated graphene on strontium titanate(STO) in ultra high vacuum at cryogenic temperatures. Field- and temperature-dependent dielectric constant of STO is used to measure the impact of substrate-induced screening on transport properties of graphene.
