Abstract for an Invited Paper
for the MAR11 Meeting of
the American Physical Society

Theoretical work on superconductivity up to 1956

ANTHONY LEGGETT, University of Illinois at Urbana-Champaign

In this talk I survey some of the attempts to understand superconductivity which preceded the 1957 work of Bardeen, Cooper and Schrieffer, and conclude by asking if there are any lessons we can draw for our current efforts to understand apparently “non-BCS” superconductors such as the cuprates and ferropnictides.
