Spin-Seebeck Effect in III-V Based Semiconductors

CHRISTOPHER M. JAWORSKI, ROBERTO C. MYERS, JOSEPH P. HEREMANS, The Ohio State University — The spin-Seebeck effect has now been observed in metals¹ (NiFe), semiconductors² (GaMnAs), and insulators³ (YIG). It consists of a thermally generated spin distribution that is phonon driven. Here we extend our measurements of the spin-Seebeck effect to other group III-V based magnetic semiconductors and present measurements of conventional thermomagnetic and galvanomagnetic properties as well as the spin-Seebeck effect.
