Orbital order and Hund's rule frustration in Kondo lattices¹

KAZUSHI AOYAMA, Hakubi Center for Advanced Research, and Department of Physics, Kyoto University, Japan, LEONID ISAEV, LSU, INDRANIL PAUL, Laboratoire Materiaux et Phenomenes Quantiques, Universite Paris Diderot-Paris 7 and CNRS, Paris, France, ILYA VEKHTER, LSU — We analyze a microscopic origin of the Kondo effect-assisted orbital order in heavy-fermion materials. By studying the periodic two-orbital Anderson model with two local electrons, we show that frustration of Hund's rule coupling due to the Kondo effect leads to an incommensurate spiral orbital and magnetic order, which exists only inside the Kondo screened (heavy-electron) phase. This spiral state can be observed in neutron and resonant X-ray scattering measurements in U- and Pr-based heavy-fermion compounds, and realized in cold atomic gases, e.g. fermionic ¹⁷³Yb.
