CHOW, DAVID ABRAHAM, MARY ROTHWELL, GEORGE KEEFE, JAY GAM-
BETTA, MATTHIAS STEFFEN, CHRIS LIRAKIS, IBM TJ Watson Research Cen-
ter
— Inserting a notch filter between a qubit and the external environment at the
qubit frequency can significantly suppress spontaneous emission mediated by the
cavity ("Purcell effect"). In order to realize this filtering in multi-qubit architec-
tures, where space comes at a premium, we will present a filter with minimal space
requirements.
