

Abstract Submitted
for the MAR14 Meeting of
The American Physical Society

Jakob Narkiewicz-Jodko –Tesla “Predecessor”

VLADIMIR SAMUILOV, SUNYSB, Narkiewicz-Jodko Foundation , VLADIMIR KISELEV, Narkiewicz-Jodko Foundation — Prof. Jakob Narkiewicz-Jodko (1947–1905) is a bright figure in the history of science of the XIXth century [1,2]. His major discoveries are: Electrography – the method of the visualization of electric discharge from the bodies due to the application of high strength and high frequency electric fields [3,4], and one of the first observations of the propagation of the electromagnetic waves and information transfer over the distances [5,6]. We review Prof. Jakob Narkiewicz-Jodko’s research results and explain our point why we consider him as the predecessor of Nikola Tesla. [1] Decrespe M.
