Enhancing Triplet Superconductivity by the Proximity to a Singlet Superconductor in Oxide Heterostructures¹ MATS HORS DAL, University of Oslo, Norway, TIMO HYART, University of Jyvaskyla, Finland, GINIYAT KHALIULLIN, Max Planck Institute for Solid State Research, Germany, BERND ROSENOW, Leipzig University, Germany — We show, how in principle, a coherent coupling between two superconductors of opposite parity can be realised in a three-layer oxide heterostructure. Due to strong intraionic spin-orbit coupling in the middle layer singlet Cooper pairs are converted into triplet ones, and vice versa. The result is a large enhancement of the triplet order parameter that persist well beyond the native triplet critical temperature.
