Investigating Magnetism in the Multiferroic RA₃(BO₃)₄ System at Low Temperature

T. YU, H. ZHANG, New Jersey Inst of Tech, L. N. BEZMATERNYKH, L.V. Kirensky Institute of Physics, K. PAGE, Oak Ridge National Laboratory, Y.-S. CHEN, University of Chicago, T. A. TYSON, New Jersey Inst of Tech — The Multiferroic system HoAl₃(BO₃)₄ is known to exhibit a strong coupling of magnetic field to the electrical polarization at low temperature. The nature of magnetic order and Ho site at low temperature is not known. However measurements reveal magnetic ordering in Ho site in HoFe₃(BO₃)₄ at low temperature. Our previous work revealed enhanced correlation between neighboring HoO₆ polyhedra for magnetic fields up to 3 T. In this work, we further investigate the origin of the magnetoelectric effect of the RA₃(BO₃)₄ system by neutron scattering and structural optimization with DFT calculation. This work is supported by DOE Grant DE-FG02-07ER46402.
