Anthropogenic “Global Warming” Alarmism: Illuminating some Scientific and Methodological Flaws LARRY GOULD, University of Hartford — There continues to be an increasing number of scientists and public figures around the world who are challenging the dominant political- and mediadriven claims that have been bolstered by so-called “consensus” scientific views – that dangerous “global warming/climate change” is caused primarily by human-produced carbon dioxide. This general talk will show that the weight of scientific evidence strongly contradicts the alarmist claims. It will also explain what are some of the methodological flaws that continue to threaten the scientific method.
