Global Warming, Climate Change (AGW) — A Critical Look

LAURENCE I. GOULD, University of Hartford — There continues to be an increasing number of scientists from around the world who are challenging the dominant claim that has been bolstered by so-called “consensus” scientific views — that dangerous “global warming/climate change” is caused primarily by human-produced carbon dioxide. This poster will show that scientific evidence contradicts that claim. It will also explain some of the errors that have been introduced from a corruption of the scientific method. (Further information can be found at <http://uhaweb.hartford.edu/lgould/>)
