Abstract for an Invited Paper
for the NES11 Meeting of
the American Physical Society

The Make-believe World of Real-world Physics

ERIC MAZUR, Harvard University

That physics describes the real world is a given for physicists. In spite of tireless efforts by instructors to connect physics to the real world, students walk away from physics courses believing physicists live in a world of their own. Are students clueless about the real world? Or are we perhaps deluding ourselves and misleading our students about the real world?
