The American Physical Society

Recent CP Results from BABAR

J. MICHAEL RONEY, Department of Physics and Astronomy, University of Victoria

The BaBar experiment has accumulated $\sim 230 \text{ fb}^{-1}$ of e^+e^- collision data at or near the $\Upsilon(4s)$ from SLAC's PEP-II collider. The currently analyzed data provides samples of $O(10^8)$ $B^0\bar{B}^0$ events. We will report on the results of recent CP asymmetry measurements from Babar, including the observation of direct CP violation in the $B^0 \rightarrow K^+ \pi^-$ decay.
