

Abstract for an Invited Paper
for the NWS06 Meeting of
The American Physical Society

The International Linear Collider¹

JAMES E. BRAU, University of Oregon

The proposed electron-positron International Linear Collider is aimed at exploration of the new physics of the Terascale. A global effort is underway to design and plan the collider, and the detectors. With a unique capability for precision measurements, the ILC will advance discoveries of the LHC, and enable discoveries beyond. The physics goals and the latest progress world-wide will be reviewed.
