Abstract for an Invited Paper for the NWS11 Meeting of the American Physical Society

Recent Progress on Neutrino Oscillations

DEAN KARLEN, University of Victoria

Neutrinos make up a large part of the known Universe but are very difficult to study, as they can pass through matter without leaving a trace. Experiments have shown that neutrinos come in three types and that they oscillate from one type to another. With new experiments coming on line, a complete picture of neutrino oscillation is starting to emerge. This presentation will introduce neutrino physics and highlight recent progress from experiments around the world
