Fractal Lifetimes & Atomic Battery¹ BAMBANG SUKARTIONO,
Former Chief-EDITOR of "KOMPAS" Daily — For lifetime, it is supposed there
that the intensive parameter (return temperature, chemical potential, etc) fluctuates.
These fluctuations evolve on a long time scale-Ryazanov-2003. We reviews them to
fractal space time whereas distinguishes time continuous or discrete.If it is true
that the conclusion depends in particles & parameters involved, we found Filippov,
et.al: **Atomic Battery based-on Ordered Dust-plasma structures**" where
the ranges of parameters for which the Coulomb crystallization of dusty plasma in
atomic battery is expected are determined. It's funny if Cf²⁵⁵ took in comparison to
"small" factor from Dittrich-2003: $f(EE,EC) = (1 - \alpha) EE + \alpha C + c_F/N$. As well
as the retrieved statement : "Experiment on the photovoltaic transformation of the
energy of fast electrons to electrical energy are carried out"- *ibid* last but not least
May 1995's CERN superconductivity in particle accelerators enhances mesoscopic
spallation reactions for Gunzi Saito & Frackowiak.

¹Heartfelt Gratitudes to PT. KOMPAS MEDIA NUSANTARA,Tbk
