Searching for super-WIMPs in leptonic heavy meson decays
ADITYA YECHAN GUNJA, KRISTOPHER HEALEY, ALEXEY PETROV,
Wayne State University — We study constraints on the models of bosonic super-weakly interacting particle (super-WIMP) dark matter (DM) with DM masses $m_X \sim \mathcal{O}(1 - 100)$ keV from leptonic decays $M \rightarrow \ell \bar{\nu}_\ell + X$, where $M = B^\pm, D^\pm, D_s^\pm$ is a heavy meson state. We focus on two cases where X denotes either a light pseudoscalar (axion-like), or a light vector state that couples to the standard model (SM) through kinetic mixing. We note that for a small DM mass these decays are separately sensitive to DM couplings to quarks, but not its mass.
