Abstract for an Invited Paper
for the PHYSTC16 Meeting of
the American Physical Society

Partnering Effectively with Schools of Education

BRIAN THOMS, Georgia State University

This panel will discuss experiences and lessons learned regarding creating and sustaining effective partnerships between physics departments and colleges of education in the production of highly-qualified physics teachers. Among the issues to be discussed are strategies for building collegial relationships and avoiding turf battles across college lines, effectively working with deans and other administrators, recognizing how to leverage different reward structures, establishing common goals and common strategies, and using data to produce consensus. The effectiveness of joint appointments, co-teaching, and committee service in building partnerships will also be discussed.
