

Abstract Submitted
for the PSF16 Meeting of
The American Physical Society

Estakhr's Effect of Superluminal Travel (Time travel, Travel back in time) AHMAD REZA ESTAKHR, Physicist — Estakhr's effect: Superluminal travel is able to reverse the direction of time and so the direction of your body's metabolism!. so People actually grow younger during Superluminal travel and as they grow younger (during travel back in time), their previous memories are disappearing and being rewritten with new memories from growing older again! (after time travel). So problems of time travel to the past are much more complex than what is imagined.

Ahmad Reza Estakhr
Physicist
