Search for $\Psi(3770)$ Decays into non D-Dbar States RUKSHANA PATEL, JOHN YELTON, University of Florida, CLEO COLLABORATION — Using the world's current largest data sample of $\psi(3770)$ charmonium resonance taken by the CLEO-c detector operating at the Cornell Electron Storage Ring, we present new results on a search for $\psi(3770)$ decays into non D-Dbar states. We compare the results of the search with the predictions based upon the mixing models and the perturbative QCD 12% rule to provide a better understanding of many aspects of charmonia.
