the American Physical Society

### **Searching for Neutrino Oscillations with MiniBooNE**

ION STANCU, University of Alabama

Here we present the first results of a search for  $\nu_e$  appearance in a  $\nu_\mu$  beam. Two independent analyses observe no significant excess of events above the calculated background for reconstructed neutrino energies above 475 MeV. The data are consistent with no oscillations within a two-neutrino, appearance-only neutrino model.
