

Abstract for an Invited Paper  
for the SES11 Meeting of  
The American Physical Society

**ATLAS in 2011: Status and Prospects**

DICK GREENWOOD, Louisiana Tech University

The ATLAS Experiment at the Large Hadron Collider (LHC) began taking data at a center of mass energy of 7 TeV in spring 2010. What have we learned from ATLAS since SESAPS 2010? In my talk, I present the status of our measurements thus far, relate these results to predictions of the Standard Model and of theories beyond the Standard Model, and conclude with our prospects for making interesting discoveries in the future.
