

Abstract for an Invited Paper
for the SES11 Meeting of
The American Physical Society

θ_{13} and Beyond

PATRICK HUBER, Virginia Tech

I will briefly review the current status of neutrino oscillation and highlight the open issues. The current generation of neutrino experiments Double Chooz, Daya Bay, T2K and NO ν A have started to probe θ_{13} and soon will deliver a first measurement. However, they can not test the mass hierarchy or study leptonic CP violation, therefore even larger facilities are needed. I will present the underlying physics and the various different proposals in detail.
