Einstein's Law of the Photoelectric Effect is Quite Wrong AHMAD
REZA ESTAKHR, Researcher — According to Einstein's explanation, emission of
electron is not possible for radiation of frequency less than threshold one. $k_e = E - w$
According to my research it is, and correct law is Schrodinger equation. $\hat{E}\Psi = \hat{H}_e\Psi$
where the \hat{H}_e is electron hamiltonian operator. $-\frac{\hbar^2\nabla^2\Psi}{2m_e} + W\Psi = \hat{E}\Psi$ which is correct
law of the photoelectric effect.
