Abstract for an Invited Paper
for the SES14 Meeting of
the American Physical Society

Higgs Boson Studies at CMS

ROBERT HIROSKY, Univ of Virginia

This talk presents an overview of recent highlights from the Run 1 Higgs boson studies at the CMS experiment. Measurements of production cross sections and properties of the observed boson at CMS are compared with standard model expectations. Selected topics covering searches for beyond the standard model Higgs boson(s) and prospects for future studies are also summarized.
