The American Physical Society

The Latest Oscillation Results from the Daya Bay Reactor Neutrino Experiment JONATHAN LINK, Virginia Tech, DAYA BAY COLLABORATION — The Daya Bay reactor neutrino experiment is one of the three current-generation short-baseline reactor neutrino experiments designed to measure the neutrino mixing angle θ_{13} . This talk will give a review the Daya Bay experiment, present the latest oscillation analysis including results on $\sin^2 2\theta_{13}$ and Δm_{ee}^2 , and discuss the current status and future prospects with an emphasis on the determination of precision oscillation parameters.
