Refinement of Production Grade Biodiesel. KEN MCGILL, ZACHARY HUFFMAN, CAMPBELL AXT, CHRISTOPHER BARRETT, ELIZABETH CRONAN, JAMICHAEL WILLIAMS, TYLER WILHOIT, ANNALEIGH JACKSON, SYDNEY NINNEMAN, Georgia College and State University — The modified Burton method for the thermal hydrogen-cracking of peanut oil has been investigated in McGill Research Group since 2009. The successful and reliable production of biodiesel has been achieved since 2014. A hydrocarbon with viscosity similar to Production Grade Diesel will work in modern diesel engines. The current product has a viscosity significantly lower than production grade diesel. The starting material has a viscosity significantly higher than Production Grade Diesel. Current research is investigating methodologies to mix starting material and product to achieve target viscosity.
