Abstract for an Invited Paper
for the SES17 Meeting of
the American Physical Society

Low Energy Tests of QCD¹

JOSE GOITY, Hampton University and Jefferson Lab

This talk will present a summary of key tests of QCD at low energy. These include decays that test the axial anomalies, and symmetry breaking corrections to those decays, the scattering lengths in $\pi - \pi$ scattering and $\pi - N$ scattering, and the σ terms. Features of violations of SU(3) symmetry in baryons are also discussed.
