Abstract for an Invited Paper  
for the TSF06 Meeting of  
the American Physical Society

### **Application of Slow Light Physics**

MARLAN SCULLY, Texas A&M University and Princeton University

We demonstrate a strong coherent backward wave oscillation using forward propagating fields only. This is achieved by applying laser fields to an ultra-dispersive medium with proper chosen detunings to excite a molecular vibrational coherence that corresponds to a backward propagating wave. The physics then has much in common with propagation of ultra-slow light. Applications to coherent scattering and remote sensing are discussed.
