

Abstract Submitted  
for the TSF17 Meeting of  
The American Physical Society

**My summer as a software developer intern** CRYSTAL BROWN, Ouachita Baptist University — This past summer, I worked as an intern software developer at ArcBest Technologies in Fort Smith. My team was given the task of rewriting the refunds system. This process involved both user interface and backend service and database design. Throughout the process, I encountered various challenges in which my background in physics, along with my developed problem solving skills, allowed me to think of multiple ways to solve these practical and real world challenges. I will outline a few of the challenges my team faced during this project and how we resolved them.
