

Abstract Submitted  
for the TSF17 Meeting of  
The American Physical Society

**Put your physics degree to work with The AIP Career Toolbox**

TONI SAUNCY, Texas Lutheran University — Nearly half of all physics bachelors level degree holders enter the workforce immediately following graduation. The Careers Toolbox, developed through an NSF funded research project, empowers students with professional development tools. Participants will learn, through interactive resources, how to identify skills that are valued in the workplace, describe their skills in ways that are meaningful to employers, find job opportunities, and stand out as a candidate. In addition, participants will explore resources for building an effective resume, interviewing, networking, and understanding other aspects of the job search, all geared specifically for physics students.
