

Abstract Submitted  
for the TSS12 Meeting of  
The American Physical Society

**The new method to send energy** PHILIP SHIN, None — I feel the electricity as radar. We can send the energy from antenna to another antenna, and it is moving easy and better than an electrical wire and safe. As a result, the transistor radio is more accurate and move stronger than the digital radio by the fact that electricity flows as a substance. To explain how the energy flows, the trees do not move by itself to hurt man(it is to be.). So the energy flow from antenna to another antenna safely and possibly without hurt as a sword. I understand that energy, the electricity is existing as radar and it proves the fact that how it flows from one place to another.
