

Abstract Submitted
for the 4CS20 Meeting of
The American Physical Society

Installation of the ICARUS side Cosmic Ray Tagger¹ TYLER BOONE, ROBERT WILSON, Colorado State University — The ICARUS experiment requires a Cosmic Ray Tagger (CRT) to achieve sufficiently low backgrounds. I will present the status of the installation of the side CRT modules (500 m²) and the 2,680 channel readout electronics, along with the implications for running the full system.
