

Abstract Submitted  
for the APR07 Meeting of  
The American Physical Society

**Fundamental Relationship Between Space, Time, Energy and Mass** ED HAMMER — A relationship has been postulated that unites energy, mass, space, and time at resonance for the first time. The relationship became apparent after the mystery of the mathematical and physical meaning of the fine structure constant of hydrogen was solved. This constant, which was called the alpha constant by Sommerfeld, and later called the Hand of God mystery by Feynman, was serendipitously solved by postulating that the subatomic structure of electromagnetic energy was quantum in nature and exists in only three dimensions of space with time. The understanding of this concept should serve to unite all the constants of nature and may form the basis of a more unified field theory.
