B_s Mixing at D0 MEGHAN ANZELC, Northwestern University, D0
COLLABORATION — We report results on the determination of the B_s oscil-
lation frequency using a large data set taken at the D0 experiment during RunII at
the Tevatron. We search for oscillations in the time dependence of flavor specific B_s
decays where the flavor of the B_s at production is determined by studying inclusive
properties of the event.
