Abstract for an Invited Paper
for the APR08 Meeting of
the American Physical Society

Charm Mixing

RAY COWAN, Massachusetts Institute of Technology

Compelling evidence for charm meson mixing was announced in spring 2007 by the BaBar and Belle Collaborations. This presentation will review the phenomenology of charm mixing and CP violation and survey the experimental progress made in searching for charm mixing over the last year. Results from semileptonic and two- and multi-body hadronic decays will be presented.
