

Abstract Submitted
for the APR08 Meeting of
The American Physical Society

The electrostatics of naked singularity ANDREA GERALICO, DONATO BINI, REMO RUFFINI, ICRANet and University of Rome “Sapienza” — In order to further explore the physical reasons leading to an equilibrium configuration of a charged naked singularity in the field of the black hole the structure of the naked singularity and its mass energy are examined. Particular attention is given to define the physical achievable, stable equilibrium configurations.
