Abstract for an Invited Paper  
for the APR10 Meeting of  
the American Physical Society

**Project X: A multi-MW Proton Source at Fermilab<sup>1</sup>**

STEPHEN HOLMES, Fermi National Accelerator Laboratory

As the Fermilab Tevatron Collider program draws to a close, a strategy has emerged of an experimental program built around the high intensity frontier. The centerpiece of this program is a superconducting H- linac that will support world leading programs in long baseline neutrino experimentation and the study of rare processes. Based on technology shared with the International Linear Collider, Project X will provide multi-MW beams at 60-120 GeV from the Main Injector, simultaneous with very high intensity beams at lower energies. Project X also supports development of a Muon Collider as a future facility at the energy frontier.
