Abstract for an Invited Paper
for the APR10 Meeting of
the American Physical Society

Experiments at the Limits of the Intensity Frontier

JACK RITCHIE, University of Texas at Austin

Experiments sensitive to very rare processes involving kaons and muons provide powerful probes for physics beyond the Standard Model. Very high intensity beams are necessary for such experiments. This talk will review the status of this class of experiments with emphasis on the plans and opportunities at Fermilab both in the near-term and later using Project X.
