Abstract for an Invited Paper  
for the APR10 Meeting of  
the American Physical Society

**ATLAS Status and First Results**

ANDREW LANKFORD, University of California, Irvine

The ATLAS Experiment at the CERN Large Hadron Collider will study a broad range of particle physics at the highest available laboratory energies, from measurements of the standard model to searches for new physics beyond the standard model. The status of ATLAS commissioning and the ATLAS physics program will be reported, and physics prospects for the 2010 LHC run will be discussed.
