The American Physical Society

Nuclear Quantum Gravitation, LIGO, Gravity B Probe. CDMS
RONALD KOTAS, Retired — LIGO systems have failed to detect gravity waves of any kind, even after years of trying. This is because there is no space fabric to transmit gravity waves. Space fabric is a fallacy concept of general relativity. There are no gravity waves. Space fabric does not push anything down. General relativity does not explain an object falling to Earth. The Gravity B Probe did not detect real frame dragging in the raw data, only program manipulation that showed a small amount of questionable data. This does not prove material frame dragging. The CDMS has not proven any Dark Matter. A Galaxy is not like a Solar System but rotates as a conglomerate; plainly Newtonian Mechanics; no dark matter needed. Other facts also disprove general relativity. The Sun's corona and Newtonian refraction bend light, not general relativity. The Perihelion of Mercury is a perfectly explainable Newtonian Mechanic, not general relativity. Time does not change, clocks change. No space fabric, no spacetime. There is no general relativity. Nuclear Quantum Gravitation with 30 proofs and indications clearly, logically explains Gravity and Gravitation. It is plainly harmonious with Newtonian Mechanics and Quantum Mechanics. This should clearly be realized and accepted, not general relativity.
